Rebling plastics has been injection molding thermoplastics for over 25 years. Plastic resins are group of synthetic material made up of long chains of molecules called monomers which are linked together to form a long chain molecule called a polymer.

Thermoplastic Materials for Injection Molding ...

Thermoplastic resin, which is of high-molecular-weight or in the form of oligomer with low-molecular-weight, is used to improve the toughness of epoxy resin system. Generally speaking, the toughening effect of thermoplastic resin is worse than rubber.

Most of these materials print at very high temperatures and require printers capable of temperatures in excess of 270 °C. This thermoplastic 3D printing material may warp as it cools, so make sure you use a heating bed. With this product, you can make gears, levers, connectors, shear pins, enclosures, sockets, and shafts.
