These are mainly classified into three types of electrodes used in the potentiometry. They are as follows. □First kind electrodes: They are composed of the metal rod immersed in its metal solution. These electrodes respond to the ionic activity of the electrode. Ex: silver electrode dipped in the silver nitrate solution.

Potentiometry - SlideShare

c) In the sample matrix when multiple components are to be analyzed, the number of components is noted duly presenting the data and the accessibility of standards is estimated. d) Methods like spectroscopic, HPLC, GC, MS etc., are considered when matched with the sample stability.
