Refactoring isn't another word for cleaning up code - it specifically defines one technique for improving the health of a code-base. I use "restructuring" as a more general term for reorganizing code that may incorporate other techniques.

### Refactoring

"An intuitive definition is that a safe refactoring is one that doesn't break a program. Because a refactoring is intended to restructure a program without changing its behavior, a program should perform the same way after a refactoring as it does before." "Code that communicates its purpose is very important.
